

Reliable broadcast algorithms

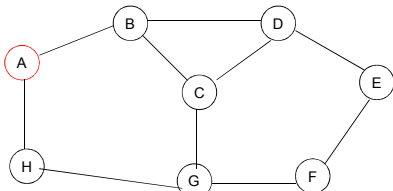

CSE 6811: Dr. Ashikur Rahman 1

Source dependent broadcast tree

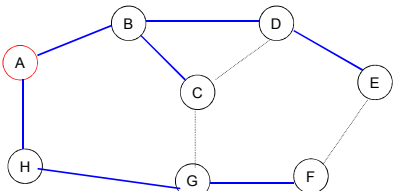

CSE 6811: Dr. Ashikur Rahman 2

Source dependent broadcast tree (Source A)

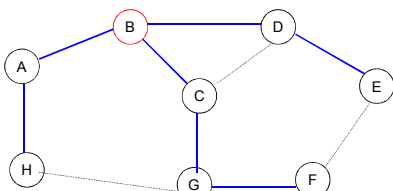

CSE 6811: Dr. Ashikur Rahman 3

Source dependent broadcast tree

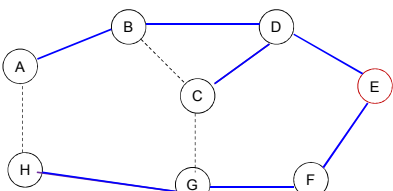

CSE 6811: Dr. Ashikur Rahman 4

Source dependent broadcast tree (Source B)

CSE 6811: Dr. Ashikur Rahman 5

Source dependent broadcast tree (Source E)

CSE 6811: Dr. Ashikur Rahman 6

Nice approach

- Source independent broadcast tree
 - (Tree minimizing number of forwarding nodes)

CSE 6811: Dr. Ashikur Rahman

7

Optimum broadcast tree problem

- Very similar to Minimum Connected Dominating set (MCDS) problem

CSE 6811: Dr. Ashikur Rahman

8

Connected Dominating Set (CDS)

- CDS is defined as follows:
 - Let a graph is $G(V,E)$
 - CDS is a set of vertices S such that
 - $S \subseteq V$
 - S is connected.
 - All elements in $V - S$ is adjacent to at least one element of S

CSE 6811: Dr. Ashikur Rahman

9

Some example CDS

$V = \{A, B, C, D, E, F, G, H\}$

$S1 = \{A, H, G, F, E\}$ $S2 = V - S1 = \{B, C, D\}$

CSE 6811: Dr. Ashikur Rahman

10

Some example CDS

CSE 6811: Dr. Ashikur Rahman

11

Trivial CDS

$S = \{A, B, C, D, H, G, F, E\}$

CSE 6811: Dr. Ashikur Rahman

12

Some non-trivial examples

CDS = {A, B, C, G, F}

CSE 6811: Dr. Ashikur Rahman

13

Some more examples

S = {A, ~~D~~, H, G, F}

CSE 6811: Dr. Ashikur Rahman

14

Some more examples

S = {A, ~~B~~, C, G}

CSE 6811: Dr. Ashikur Rahman

15

Minimum Connected Dominating Set (MCDS)

- Must be a CDS
- Having minimum number of nodes

CSE 6811: Dr. Ashikur Rahman

16

Minimum Connected Dominating Set (MCDS)

S = {B, C, D, G}

CSE 6811: Dr. Ashikur Rahman

17

There is another MCDS, can you find it?

Another MCDS

S = {B, C, G, F}

CSE 6811: Dr. Ashikur Rahman

18

MCDS can be used for broadcast!

$S = \{ B, C, D, G \}$

CSE 6811: Dr. Ashikur Rahman

19

Source is an element of MCDS

$S = \{ B, C, D, G \}$

CSE 6811: Dr. Ashikur Rahman

20

Source is an element of MCDS

$S = \{ B, C, D, G \}$

CSE 6811: Dr. Ashikur Rahman

21

Source is an element of MCDS

$S = \{ B, C, D, G \}$

CSE 6811: Dr. Ashikur Rahman

22

Source is an element of MCDS

$S = \{ B, C, D, G \}$

CSE 6811: Dr. Ashikur Rahman

23

Source is an element of MCDS

$S = \{ B, C, D, G \}$

CSE 6811: Dr. Ashikur Rahman

24

Source is not an element of MCDS (Say A)

$S = \{ B, C, D, G \}$

CSE 6811: Dr. Ashikur Rahman

25

Source is not an element of MCDS

$S = \{ B, C, D, G \}$

CSE 6811: Dr. Ashikur Rahman

26

MCDS for broadcast

- Number of forwarding:
 - Best case: $|MCDS|$
 - Worst case: $1 + |MCDS|$
- Unfortunately finding MCDS is an NP-complete problem.
- Approximation algorithms are available

CSE 6811: Dr. Ashikur Rahman

27

Can you think of an exact algorithm for MCDS construction?
It doesn't have to be in polynomial time....

CSE 6811: Dr. Ashikur Rahman

28

Approximation of MCDS

All nodes are colored **white**

CSE 6811: Dr. Ashikur Rahman

29

Approximation of MCDS

Pick up the node having max **white** neighbors,
and paint it to **black**

CSE 6811: Dr. Ashikur Rahman

30

Approximation of MCDS

Color all its neighbors to **gray**

CSE 6811: Dr. Ashikur Rahman

31

Approximation of MCDS

Pick up one of the gray nodes having most **white** neighbors and color it to **black**

CSE 6811: Dr. Ashikur Rahman

32

Approximation of MCDS

Paint all neighbors of newly picked node to **gray**

CSE 6811: Dr. Ashikur Rahman

33

Approximation of MCDS

Continue this process.....

Approximation of MCDS

Continue this process.....

CSE 6811: Dr. Ashikur Rahman

51

Approximation algorithm may not work well!

CSE 6811: Dr. Ashikur Rahman

52

Approximation of MCDS

- Approximation is applicable when we have overall topology information
- Obtaining overall topology information in ad hoc wireless network is like “shooting your own foot”.
- We need to develop some heuristics which can work using small topology information

CSE 6811: Dr. Ashikur Rahman

53

Two heuristics that create CDS in a distributed way

- Self pruning (reactive)
- Dominant pruning (proactive)
- Reactive vs proactive
 - You proposed a topic for your project (**reactive approach**)
 - I forced you to work on a particular topic (**proactive approach**).

CSE 6811: Dr. Ashikur Rahman

54

Self-pruning philosophy

A.C.(B)
Additional Coverage Area

A.C.(C)

Additional coverage does not help!
A miss is a miss!

CSE 6811: Dr. Ashikur Rahman 55

Self Pruning

- Assumptions:
 - A node knows all of its 1-hop neighbors
 - Periodic hello messages
 - When a node generates a broadcast message, it appends its list of neighbors in the header.
 - Neighbor list gets replaced each time a forwarding occurs

CSE 6811: Dr. Ashikur Rahman 56

Know before you decide....

Is $N(V_j) - N(V_i) - V_i$ empty?

Packet

CSE 6811: Dr. Ashikur Rahman 57

Redundant case

Only common neighbor(s)

CSE 6811: Dr. Ashikur Rahman 58

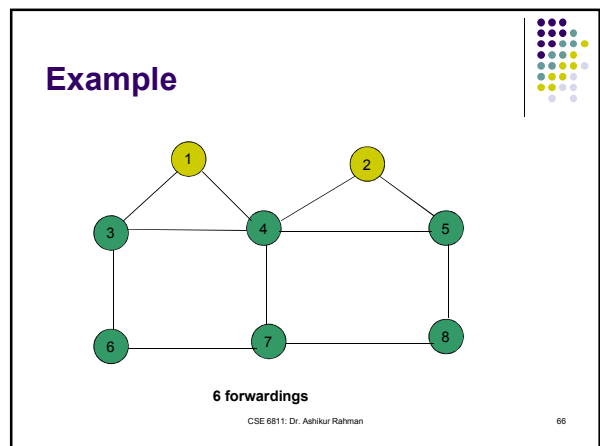

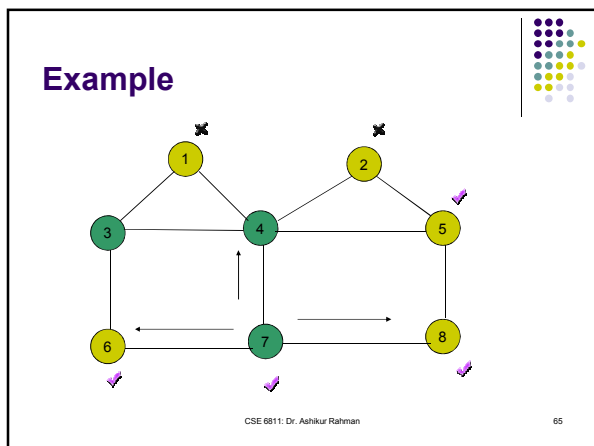

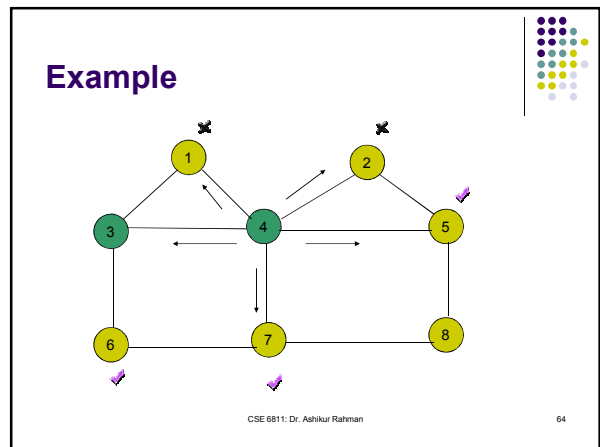

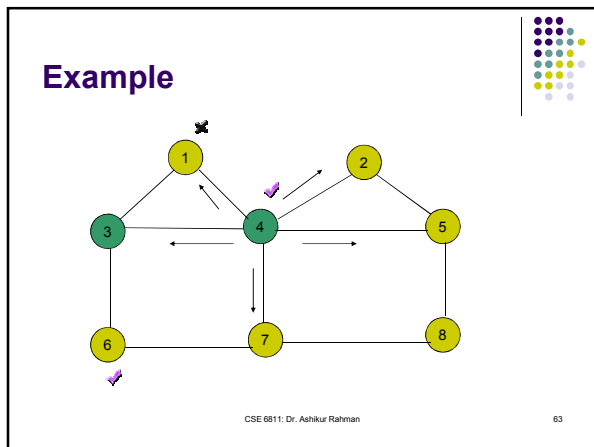

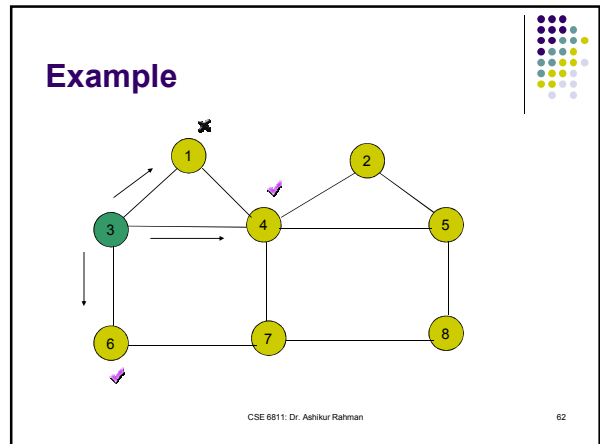

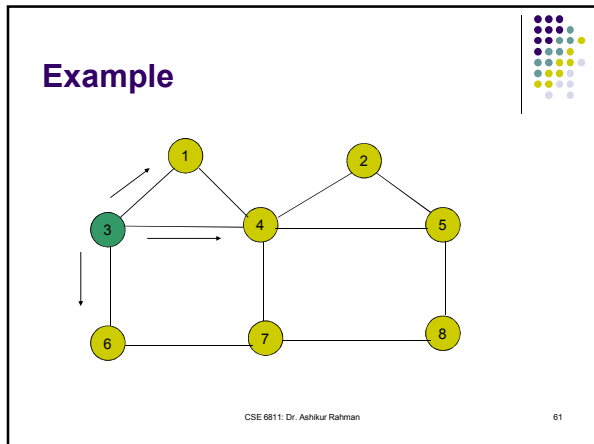

Non-redundant case

There is at least one neighbor in A.C. Area

CSE 6811: Dr. Ashikur Rahman 59

Example (Source 3)

CSE 6811: Dr. Ashikur Rahman 60

How good self-pruning is?

CSE 6811: Dr. Ashikur Rahman

67

More optimization possible.... (proposed in another work)

$$N(B) - N(A) - \{A\} = \{D\}$$

$$N(C) - N(A) - \{A\} = \{D\}$$

CSE 6811: Dr. Ashikur Rahman

68

More optimization Algorithm

- Suppose v receives a packet m from u
- Calculate $C(v,m) = N(u) \cup \{u\}$
- Wait for a time T before taking decision
- During wait suppose v receives same broadcast from w
 - Update $C(v,m) = C(v,m) \cup N(w) \cup \{w\}$
 - Is $N(v)$ a subset of $C(v,m)$?
 - If yes then drop
 - Otherwise continue waiting
- End of waiting rebroadcast
- T can be set intelligently

CSE 6811: Dr. Ashikur Rahman

69

Example

CSE 6811: Dr. Ashikur Rahman

70

Example

CSE 6811: Dr. Ashikur Rahman

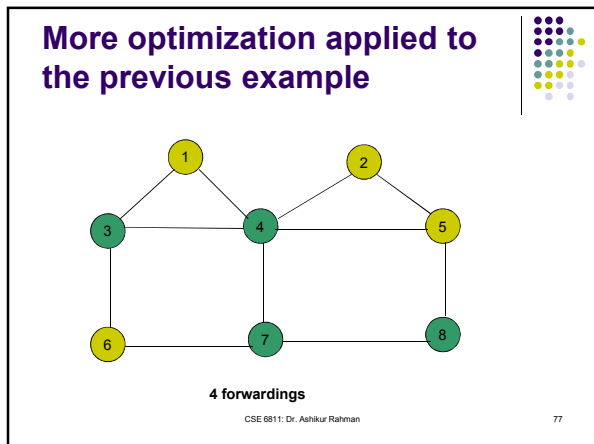

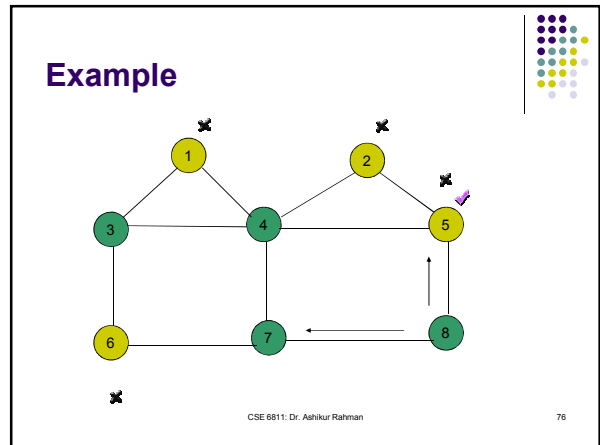

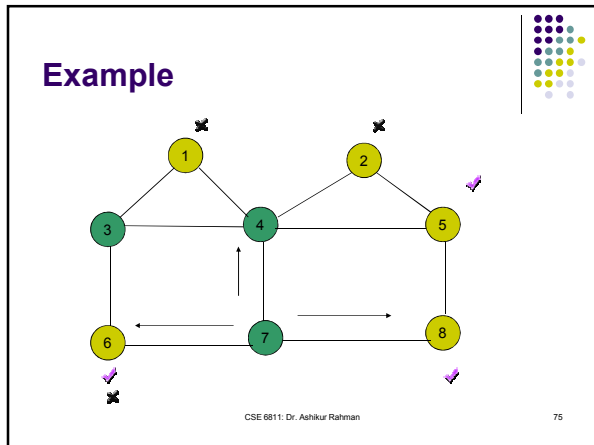

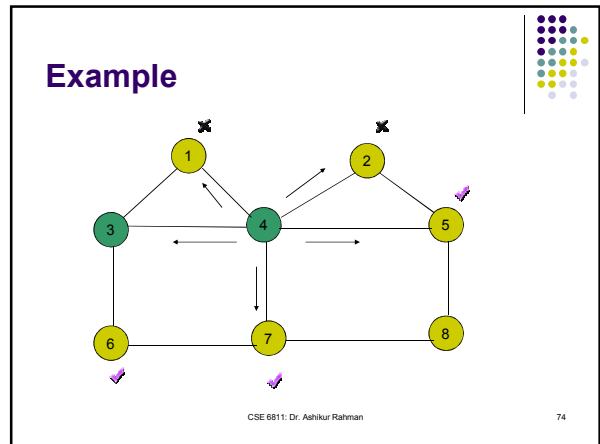

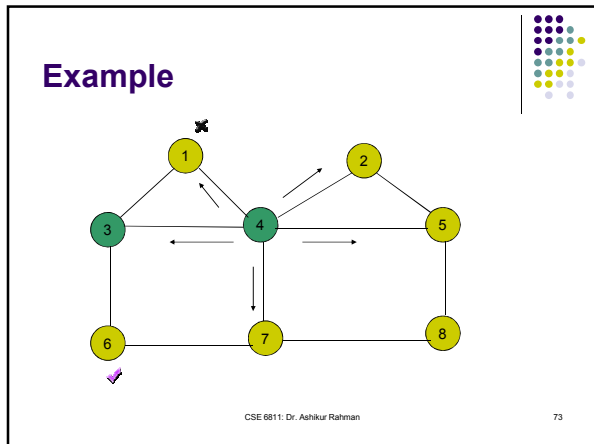

71

Example

CSE 6811: Dr. Ashikur Rahman

72

Dominant pruning (DP)

- Proactive
- A node selects some of its neighbors for forwarding. (based on some criteria)
- The selected set of nodes are called forward list and specified in the packet header
- Need 2-hop information
 - $N(u)$, $N(N(u))$

CSE 6811: Dr. Ashikur Rahman 78

Dominant pruning explained

- Suppose node v received a broadcast from u .
- Node v creates a list of neighbors who should re-forward after receiving from v .

Here is how v creates the forward list

- Among all its 2-hop neighbors, nodes in $N(u)$ already received the broadcast from u .
- All its 1-hop neighbors in $N(v)$ will receive when v will broadcast.
- Among its all 1-hop and 2-hop neighbors the following set of nodes U_v haven't received yet: $U_v = N(N(v)) - N(v) - N(u)$
- The forward list is the minimum subset of $B(u,v)$ such that each node in U_v is neighbor of some node in $B(u,v)$.

CSE 6811: Dr. Ashikur Rahman 79

Can be mapped to set cover problem

CSE 6811: Dr. Ashikur Rahman 80

DP algorithm

- Let $F = \emptyset$, $K = \{S_1, S_2, \dots, S_n\}$ where $S_k = N(v_k) \cap U$ ($1 \leq k \leq n$), $Z = \emptyset$.
- Find the set S_k whose size is maximal in a set K .
- $F = F \cup \{v_k\}$, $Z = Z \cup S_k$, $K = K - \{S_k\}$, $S_l = S_l - S_k$ for all $S_l \in K$.
- If $Z = U$, complete the algorithm.
- Otherwise, repeat from 2 again.

CSE 6811: Dr. Ashikur Rahman

DP Algorithm in action

$N(4) = \{1, 2, 3, 4, 5, 7\}$

$N(N(4)) = N(4) \cup \{6, 8\} = \{1, 2, 3, 4, 5, 6, 7, 8\}$

CSE 6811: Dr. Ashikur Rahman 82

DP Algorithm in action

$B = \{1, 2, 3, 5, 7\}$

$K = \{\{6\}, \{8\}, \{6, 8\}\}$

$U = \{6, 8\}$

Choose 7

CSE 6811: Dr. Ashikur Rahman 83

DP Algorithm in action

$N(7) = \{4, 6, 7, 8\}$

$N(N(7)) = \{1, 2, 3, 4, 5, 6, 7, 8\}$

$N(4) = \{1, 2, 3, 4, 5, 7\}$

$U = N(N(7)) - N(4) - N(7) = \{ \}$

CSE 6811: Dr. Ashikur Rahman 84

Comparison Self-pruning Vs. Dominant pruning

- Reactive vs. Proactive
- Overhead –
 - winner Self-pruning
- Optimization –
 - winner Dominant pruning
- Complexity –
 - winner Self-pruning
- Frequent topology changes (high mobility)-
 - winner Self pruning

CSE 6811: Dr. Ashikur Rahman
